# Introduction:

- Social networking is the grouping of individuals into specific groups, like small rural communities and neighborhood subdivision. Internet is used by millions of people who are looking to meet others. Social network builds visual and mathematical analysis of human relationships homogeneously. Social network is the mapping of relationships between all classes people, groups, organizations, and URLs connected information entities. Social networking is in working of all classes/sector peoples, especially any workplace, organizations, university, it is most people online.
- Social networking application is a huge project comprising various features like user profile updating, notification system, friends requesting and accepting system, blog posts (images, content, videos), messaging system and friend's list organization and various other application enhance the overall looks and feel of the web applications.

# Application:

When people stand behind their opinions and actions, our community is safer and more accountable. For this reason, you must:

- Use the same name that you use in everyday life.
- Provide accurate information about yourself.
- Create only one account (your own) and use your timeline for personal purposes, and
- Not share your password, give access to your account to others or transfer your account to anyone else (without permission).
- Which has university's verified g-mail .
- Also user will be must teacher and student.

# Motivation:

- Social networking is in working of all classes/sector peoples, especially any workplace, organizations, university, it is most people online.
- Presently marketplace has more social network site available like Facebook , Instagram , Twitter e t c , whose has millions of user, our social site also alternative , but it will be challenging with running social networks.
- That's why we build our social site in a certain platform. Whose user will be just university's people.
- User will be just university's teachers & students.
- Every user have must be of university verified email address.
- Where just teachers and students can open account, post their activity, discuss their problems and share and upload their solutions and other things also.
- OTP notification will be sent to the user's verified email.
- Also with update incredible feature's in this project in future.

# Objectives:

- The objectives of the Social Networking Site is to manage the details of users to share ideas, digital photos and videos, posts, and to inform others about online or real-world activities and events with people in their network.
- This social network platform include having registration and login, profile, newsfeed, friends, friends search bar, messaging, notification, settings, privacy, help & support, log out etc.

## **RDBMS (Relational Database Management System)**

### Project category :

One of the most well-known types of social media is social networks.

These networks allow users to connect with people and brands online.

Social networks can help us:

- Build brand awareness
- Generate new leads
- Build relationships with customers
- Provide customer service
- And more

Many people call social networks “relationship platforms” because they allow people to connect and build a relationship. You can share information, photos, and more through these sites. These platforms focus on sharing knowledge and connecting with people.

# Requirements:

## Software requirements :

Uses only software requirements:

- Operating System : Windows 10
- IDE : VS code (Visual studio code).
- Front End : HTML5, CSS3, Bootstrap, JavaScript, jQuery.
- Back End : PHP(Hypertext preprocessor)
- Database : MySQL.

# Methodology diagram of proposed system:

The methodology through diagram given bellow :

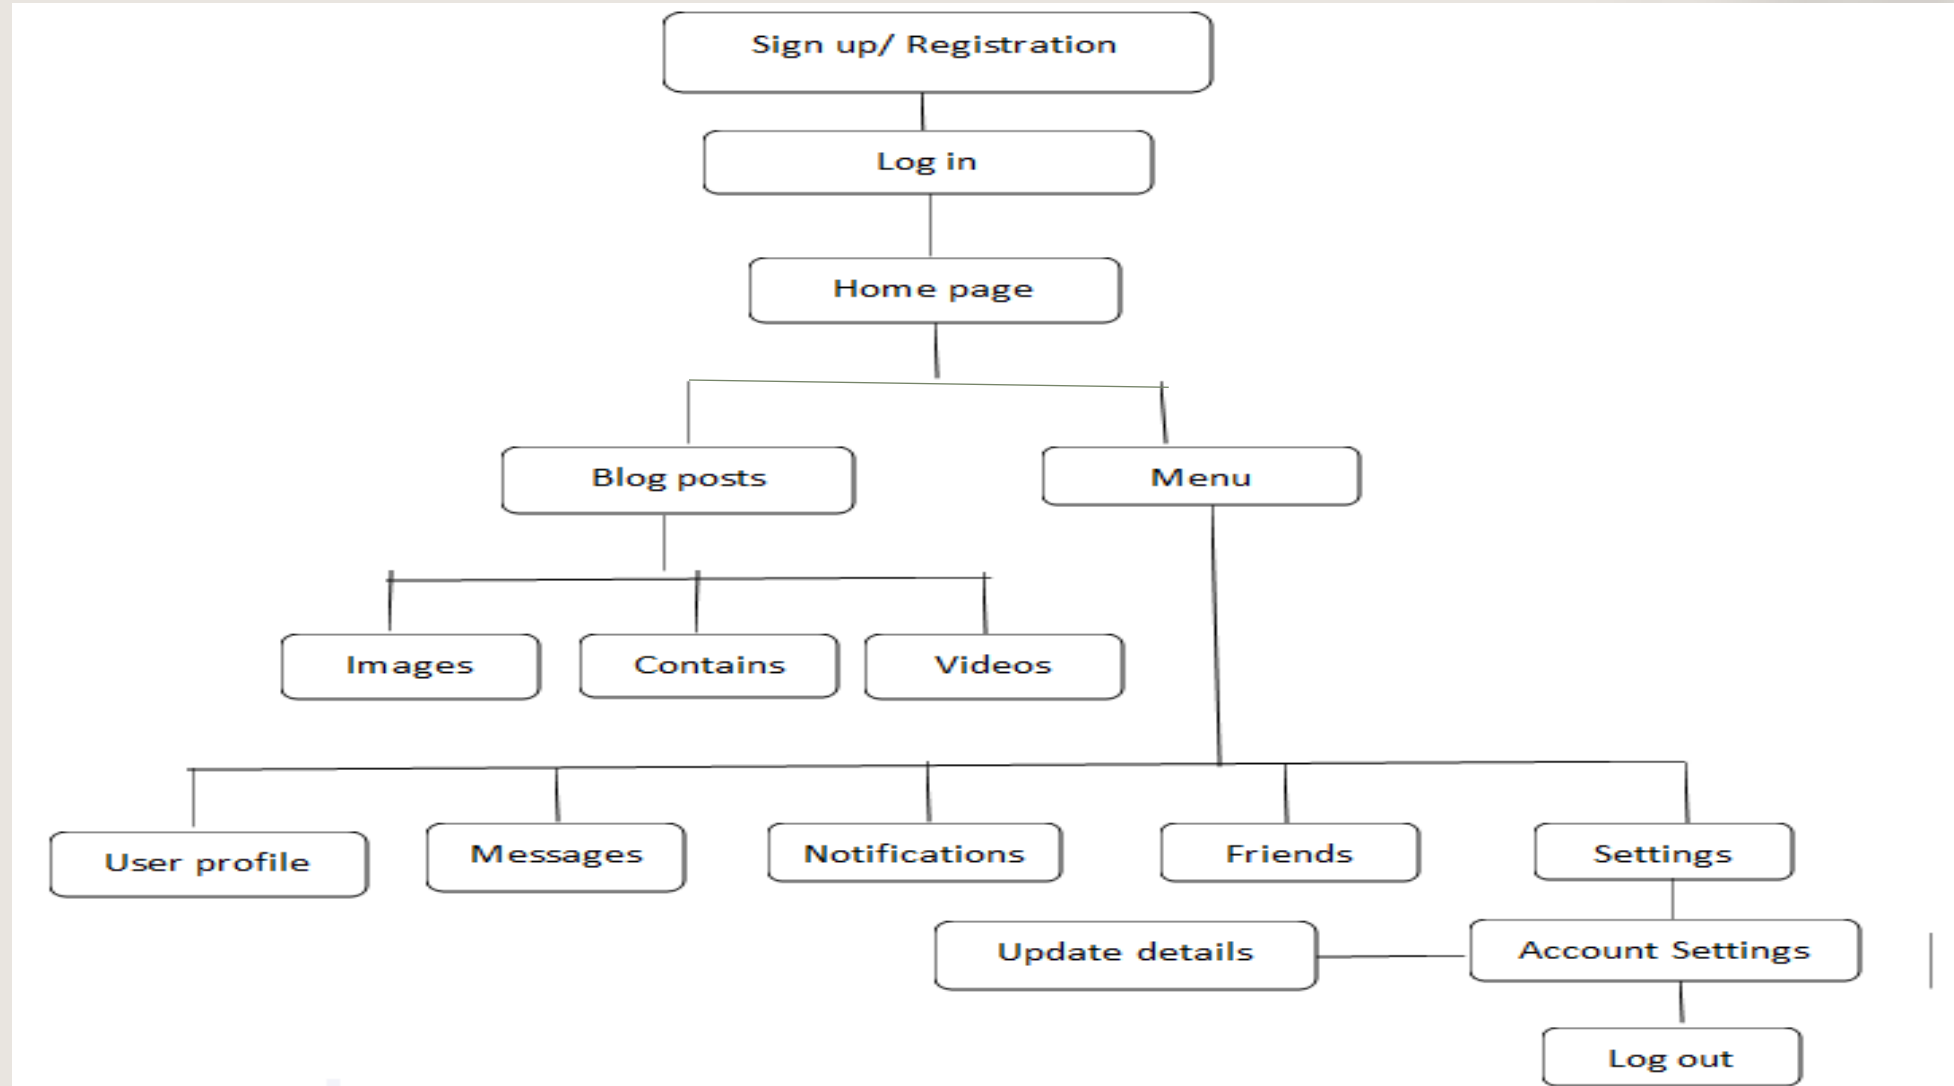

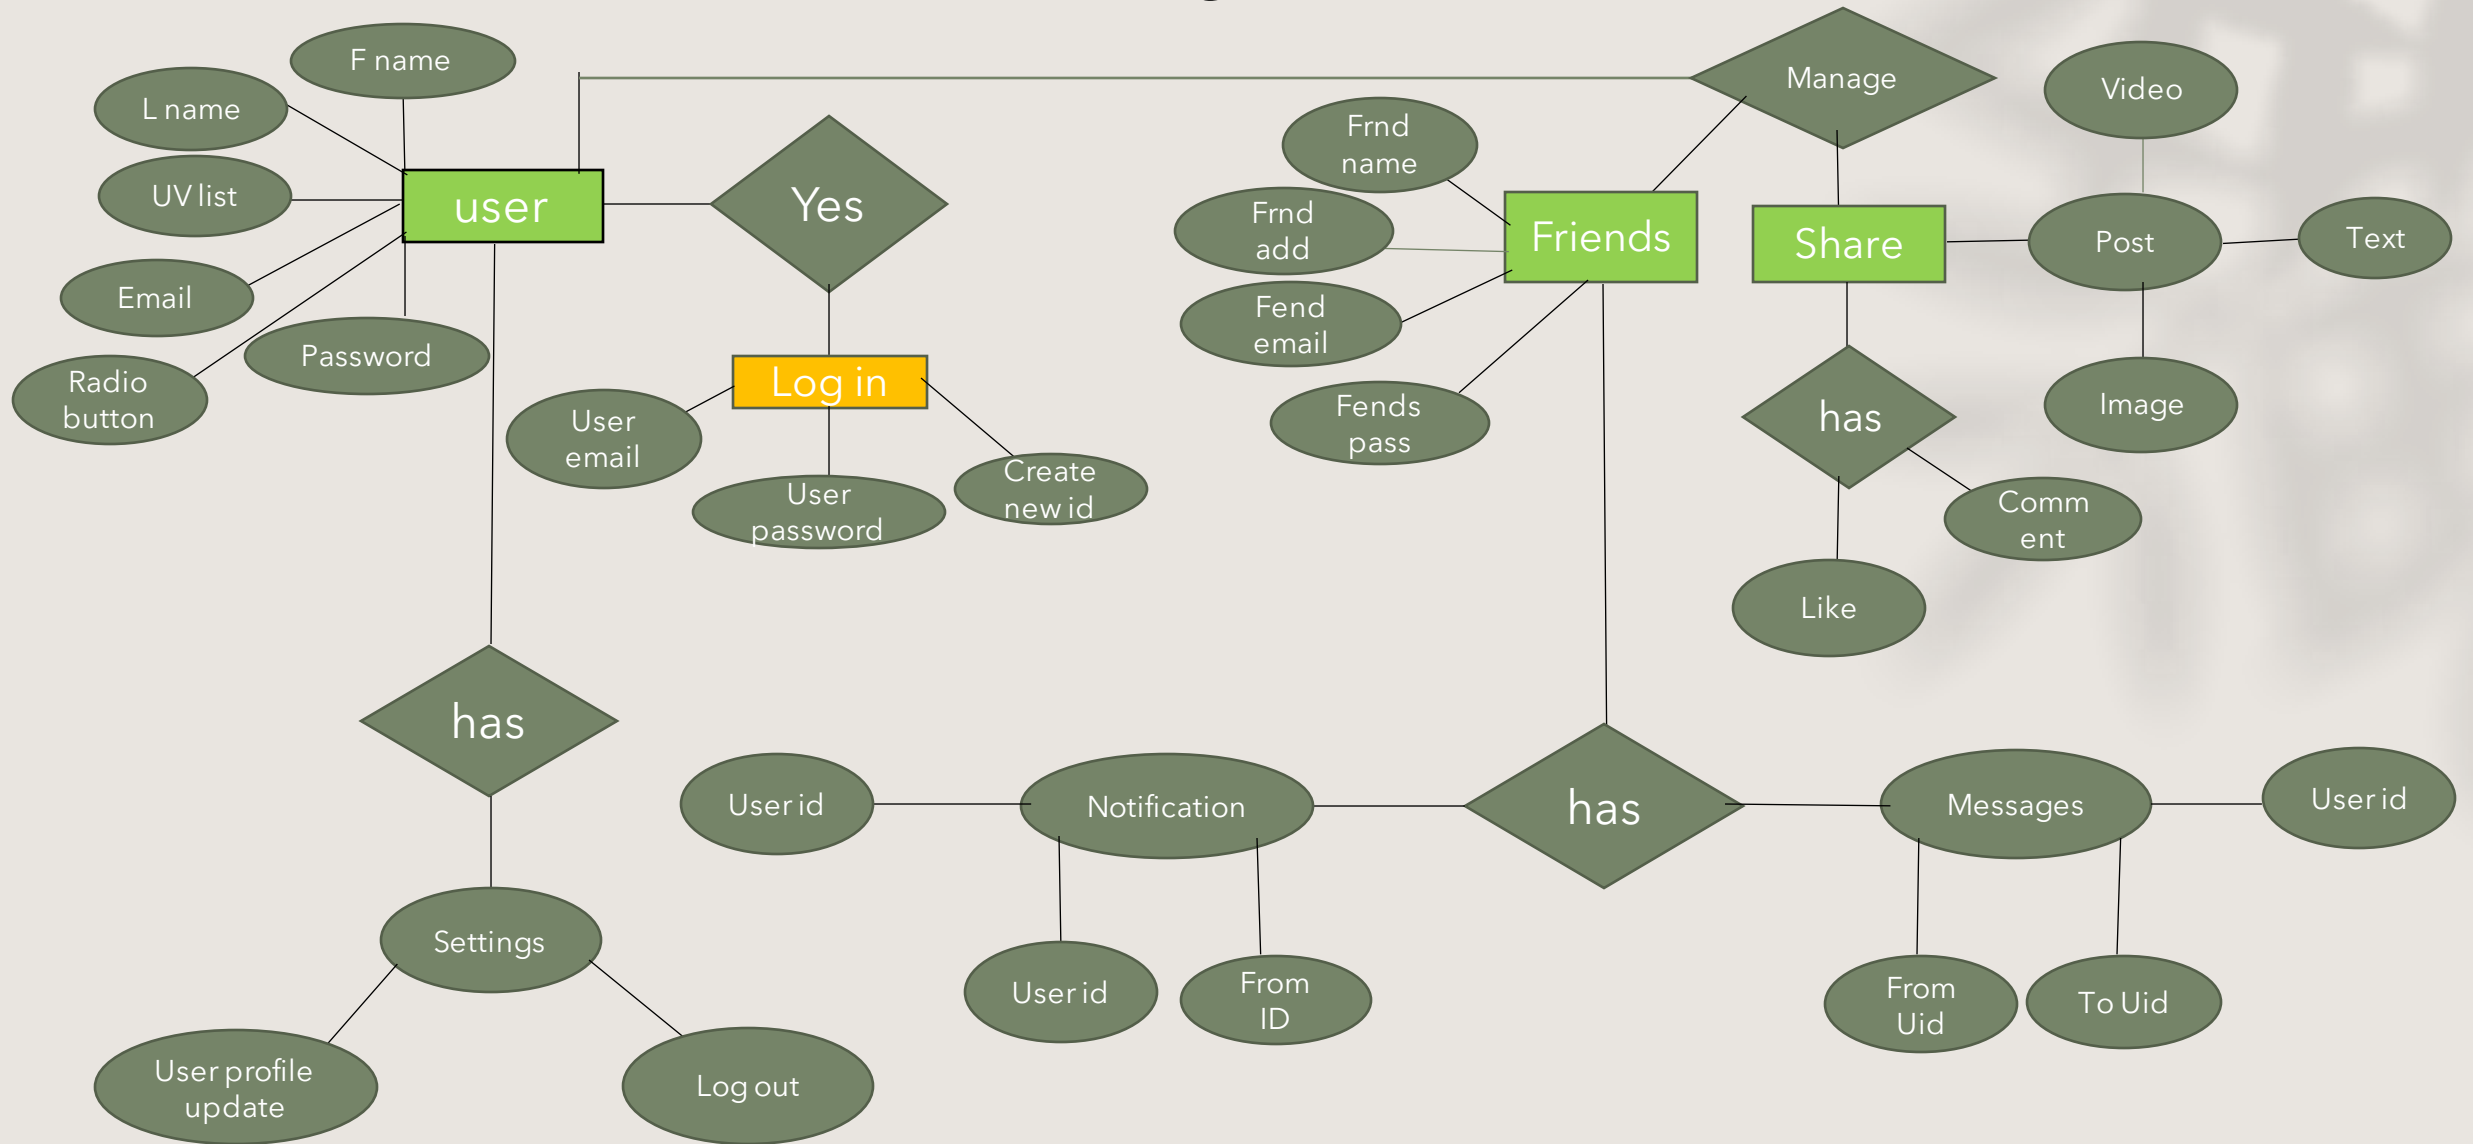

Figure: Block diagram of the methodology.

# ER Diagram:

# Obligation:

Have obligations for using this application.

- i. Internet connection accessibility device.
- ii. This site have to be used in any browser.
- iii. Without registration or log in user cannot visit the website.

# Future Scope:

In future we have more plans to develop in this project:

- Include user's google map location system.
- Voice comment system.
- Project algorithms know what type in your' s posts.
- Marvelled journal system.
- post will be restricted and auto detected use by bot system.

# Conclusion:

This application is easy to be used by the user. Fastfeed allows user to navigate easily and fast. Other than that, is an interactive platform help user to chat with others, can get updates of posts, can find old friends and school , collage & university mates. When friends go away to any other place, we often don't get the chance to communicate with them. But now its gives us the opportunity to communicate with our Old friend very easily without any cost. Surely, it is going to make you feel happy to see your old friend sharing some happy photos from another part of the world.

Thank you
